Groww | Lead Business Analytics

About Groww:

We are a passionate group of people focused on making financial services accessible to every Indian through a multi-product platform. Each day, we help millions of customers take charge of their financial journey. Customer obsession is in our DNA. Every product, every design, every algorithm down to the tiniest detail is executed keeping the customers' needs and convenience in mind. Our people are our greatest strength. Everyone at Groww is driven by ownership, customer-centricity, integrity and the passion to constantly challenge the status quo.

Are you as passionate about defying conventions and creating something extraordinary as we are? Let's chat.

Our Vision:

Every individual deserves the knowledge, tools, and confidence to make informed financial decisions. At Groww, we are making sure every Indian feels empowered to do so through a cutting-edge multi-product platform offering a variety of financial services. Our long-term vision is to become the trusted financial partner for millions of Indians.

Our Values:

Our culture enables us to be what we are — India's fastest-growing financial services company. It fosters an environment where collaboration, transparency, and open communication take center-stage and hierarchies fade away. There is space for every individual to be themselves and feel motivated to bring their best to the table, as well as craft a promising career for themselves.

The values that form our foundation are:

- Radical customer centricity
- Ownership-driven culture
- Keeping everything simple
- Long-term thinking
- Complete transparency

What you will do:

- Operate in a **hands-on, pod-leading capacity** — actively contributing to analysis and deliverables while mentoring and guiding a small team/pod to drive quality and timely outcomes

- Interact with senior stakeholders including department heads/CXOs; drive projects independently with senior management stakeholders and also collaborate with teams to drive impact and results
- Partner with business/product management teams, identify and track appropriate performance measures, key performance indicators, and associated drivers
- Work with engineering and research teams on designing, building, and deploying data analysis systems for large data sets and extracting meaningful insights for Business, Marketing, and Product
- Create algorithms to extract information from large data sets
- **Apply advanced analytics and AI/ML techniques** (beyond basic prompting/tool usage) to build predictive models, drive automation, and uncover deeper business insights
- Establish scalable, efficient, automated processes for model development, model validation, model implementation, and large-scale data analysis
- Develop metrics and prototypes that can be used to drive business decisions
- Provide support for Sr Management reviews and Investor meetings at regular intervals
- Design scorecards for business units and automate reports for internal and external stakeholders
- Balance individual contribution with pod leadership — staying close to the data and execution while also owning team output and stakeholder communication

Who you are:

- 5-7 years of relevant Analytics experience, with prior experience **leading a pod/small team in a hands-on capacity**
- Highly proficient with SQL; familiar with Data Visualization tools like Tableau, Power BI, Looker Studio, etc.
- **Working knowledge of advanced analytics and AI/ML concepts and applications** — experience building/deploying models (e.g., regression, classification, clustering, forecasting) or working closely with ML teams; genuine depth beyond basic GenAI prompting is expected
- Strong problem-solving ability
- The candidate needs to exhibit structured thinking, strong analytical skills, process orientation, pro-activeness, and the ability to take ownership of projects
- Strong leadership and project management skills, with demonstrated ability to **lead by example** — balancing strategic oversight with hands-on execution
